

# **1 C++**

C++ is an object oriented programming language (this means it is a language which deals with “objects” that have or contain data/code which are in form of fields). It was created as an extension to the c programming language. It was created in 1985.

## **1.1 CREATOR**

Creator :Bjarne Stroustrup

### **1.1.1 USES OF C++**

Honestly almost any coding or software has c++ imbedded in it but ill just name a few such as google, adobe, hp(Hewlett Packard),ibm, etc.

### **1.1.2 I.D.E.S FOR C++**

Like I said earlier, c++ can go with almost anything so i.d.e.s like eclipse, netbeans, etc can be used as suitable ides

### **1.1.3 OTHER PROGRAMS LIKE C++**

Programs like c, python, java and ruby are related to c++
